

CI 3-4 Poultry™ will change the way you raise poultry

- "Improves feed conversion"¹
- "Increases average weight"¹
- "Reduces flock mortality"²
- "Improves your profits"

Ask me how I got this way!

Here's what our customers say about CI 3-4 Poultry™ :

"Since we started using CI 3-4 Poultry, overall mortality dropped, and we've had fewer downgrades at the slaughtering plant. There have been great improvements in feed conversion. We had a 9 point improvement in one flock, and 21 points improvement in average weight! Most of our tests showed feed conversion improvements anywhere from 4 to 13 points" — D.T., Delaware, USA¹

"When testing C I3-4 Poultry for the first time, it suppressed an e. coli challenge in the house being tested, while untreated houses alongside experienced heavy mortality." — E.B. Ltd., United Kingdom²

"The odor and ammonia are nearly gone. It sure doesn't smell like a chicken farm!"
-- V.S.F., United Kingdom

Frequently Asked Questions about CI 3-4 Poultry water additive

What is it?

CI 3-4 Poultry, a product of WE International, Inc., is a revolution in poultry production. This new drinking water additive is designed to improve overall weight gain of broilers, turkeys, and any other meat birds. It also improves layer egg production, and the production and hatchability of breeders.

How does it work?

CI 3-4 Poultry breaks down ingredients in poultry feed, making it easier for the birds to digest. As a result, the birds are able to assimilate ingredients in the feed that are not easily digested. This translates into less wasted feed, improved feed conversion, and a higher average weight

Our customers said it best about CI 3-4 Poultry: "... it suppressed an e. coli challenge in the house being tested"; "... we had a 9 point (feed conversion) improvement in one flock and 21 points improvement in average weight!"; "The odor and ammonia are nearly gone. It sure doesn't smell like a chicken farm."

Is it easy to use?

CI 3-4 Poultry costs only a few cents per bird, but offers great benefits and savings. This water-based product can be easily introduced into your water system, and there is no powder to collect in the system or clog your filters.

Is it approved?

All ingredients are non-toxic, "generally regarded as safe," and meet all requirements of American Association of Feed Control Officials, Inc. (AAFCO) as listed in their current publication.

There has been a lot of coverage in the news about artificial growth hormones and the problems they create for animals and people. Does CI 3-4 Poultry contain hormones?

No. This product does not contain any growth hormones, bacteria, or live products. It is a natural enzyme-based water additive. Enzymes act as catalysts to make other processes function more efficiently. CI 3-4 Poultry is not only safe, it has no residual carryover.

Geese aren't the only onesTM that can lay golden eggs
