

Now your biggest waste management problem is solved!

Before Global-Life

After Global-Life

Global-Life can be used in poultry & livestock housing, manure and litter treatment, animal waste management, and composting applications

- reduces harmful pathogens in litter and lagoons
- controls ammonia and eliminates odor
- breaks down solids in manure lagoons
- speeds up composting
- non-hazardous
- non-toxic
- bio-degradable
- environmentally safe
- 100% water soluble
- requires no special equipment
- USDA approved

**environmentally safe
bio-stimulant**

Frequently Asked Questions about Global-Life™ Bio-Stimulant

What is it?

Global-Life is a bio-stimulant designed to speed bio-remediation of organic waste, animal waste, and waste water. It also eliminates odor, and is used for ammonia control. It has been introduced to several animal production operations throughout the United States and various other countries. All demonstrate similar results: bio-remediation time reduced by 20% - 75%, and significant elimination of odor, because it contains high amounts of free and dissolved oxygen.

How does it work?

Global-Life stimulates existing microbes already present in the waste product. These microbes then consume and digest the waste, converting it to non-toxic byproducts such as water, carbon dioxide, and a minimal amount of sediment.

Where can it be used?

Global-Life has already been used with great success in a wide variety of poultry and livestock applications. It is used in slurry lagoons, slurry tanks, compost piles, directly on broiler litter, and is sprayed in fields to rejuvenate depleted soil.

It is also used in municipal waste water treatment plants and industrial waste treatment facilities. Use of Global-Life in municipal and industrial wastewater treatment plants, will increase the breakdown rate of animal fats and oils, cellulose (such as cotton, cigarettes, and various forms of paper), and wastewater treatment detergents. It even eliminates some types of hazardous waste. Global-Life is ideal for odor control in municipal and industrial sewage treatment.

Is it safe?

Global-Life is non-toxic, non-hazardous, completely biodegradable, water soluble, and safe to use directly on plants and animals as a natural biological deodorant. It is USDA authorized for use in sewage and/or drain lines of official establishments operating under the Federal meat, poultry, shell egg grading, and egg products inspection programs. It also meets the published regulations of several US agencies: the Environmental Protection Agency (EPA), Occupational Safety and Health Administration (OSHA), Department of Transportation (DOT), and California's Clean Air and Water Regulations.

Does Global-Life contain any bacteria?

Not at all. Unlike other products of its kind, Global-Life is not a live microbial additive. It is not a bacteria. It is a self-generating bio-system, which increases growth of existing microbial life. Global-Life has no live components.

Why is that better?

Because so little is known about the results of introducing new bacteria to an existing system, it can be difficult to receive permits and governmental clearance to use products with live components.

Is it cost effective?

When you consider the costs of transportation, odor abatement, ammonia reduction, machinery and storage facilities in your current system, you will find that using Global-Life instead will save you money in the short term and increase your profits over the longer term. Of course, the most convincing results are the ones which you experience in your own™ applications.
